

# AQUASENSE AI ? Pitch Deck

AgriTech • Seed • Vietnam

## 1. Problem

Smallholder farmers lose 20-30% of crop yield due to late detection of water stress and nutrient deficiency. Manual field checks are slow, expensive, and miss early warning signals.

## 2. Solution

AquaSense AI combines low-cost soil sensors with computer vision to predict irrigation needs 48 hours ahead. Farmers get SMS alerts and simple dashboards in Vietnamese.

### 3. Product

- Sensor kit (moisture, EC, temp) + mobile app
- AI model trained on 12k field images in Mekong Delta
- Offline-first mode for low-connectivity areas

### 4. Market

TAM: \$4.2B SEA smart agriculture sensors

SAM: Vietnam + Thailand rice belts

SOM: 50k small farms in 24 months

### 5. Traction

- 180 pilot farms in An Giang & Dong Thap
- 22% average water savings, 11% yield lift
- LOIs with 2 cooperatives and 1 agri-input distributor

## 6. Business model

Hardware kit \$89 + SaaS \$3/farm/month

Gross margin target 58% at scale

## 7. Team

CEO: Minh Tran ? ex-Grab ops, Agritech fellow

CTO: Linh Nguyen ? ML engineer, formerly VinAI

Advisor: Prof. Hai (Can Tho University)

## 8. The ask

Raising \$800k Seed for hardware iteration, field expansion,  
and B2B sales to cooperatives across the Mekong.
